Oracle Expertise

DataArt has passed a 57,000-hour mark of Oracle based development, and started offering this expertise to Small and Mid-size Businesses (SMBs). The range of projects spans from asset management and workflow automation to publishing and billing.

Oracle based solutions provide virtually unlimited scalability, high performance, reliability and security. The SMB oriented licensing options of Oracle corp. coupled with DataArt's agile development method allow for a significant IT costs reduction.

SMB Oriented

DataArt has always used Oracle technologies as a powerful tool for implementing enterprise solutions. However, if previously Oracle was used on projects only for large-scale clients, in the ranks of Mail.ru – the largest e-mail provider in Eastern Europe with over 11 million users - today DataArt makes Oracle solutions available for SMBs as this technology is often crucial for clients' organic growth.

Flexible Solutions

DataArt has completed a series of complex projects using formal methodologies, such as Oracle CDM and RUP. However, since these solutions are often time and money consuming, DataArt offers a more flexible, lighter models which allow for faster and more affordable development process - maintaining the quality of the product and providing for the flexibility of the system's evolution and growth.

Experience

DataArt is proud to report that we possess over 57,000 hours of total Oracle experience, including projects in the following areas:

- Internet services
- Telecommunications
- Publishing
- Asset Management
- Workflow Automation and Job Tracking
- Billing

While working on these projects, DataArt has mastered all Oracle platform's features including interMedia, Oracle Text and object capabilities introduced in the latest releases of Oracle Database Server.

Apart from the standard Oracle Developers Suite products, DataArt utilizes .NET, Java, C++ and third party reporting tools for developing client-side applications.

We've made good use of Oracle Application Server for the creation of three-tier architecture applications, and of Oracle Discoverer for the development of analytical systems.

Technical Capabilities

Our technical capabilities include:

- Oracle Database (SQL, PL/SQL, object capabilities)
- Oracle Text
- interMedia
- Oracle Discoverer
- Oracle Application Server
- Oracle Portal
- Reports Developer
- Forms Developer
- JSP & PSP
- OC4J
- Oracle e-Business Suite (modules FA, ABM)

DataArt is an expert in migrating data to Oracle databases and porting various applications to the Oracle platform.
