DataArt has managed a range of successful projects for UK-based clients, earning an excellent reputation and respect of such well-known organizations as Cancer Research, Orbian, Electronic Solutions, Black Ink Media, and some others.

Working for clients from the United Kingdom, DataArt has covered the following areas:

- *Workflow Automation and Job Tracking*
- *Internet Services*
- *Media*
- *Financial Supply Chain Management*
- *Real Estate Management*

Cancer Research UK is one of the world's leading charities dedicated to researches into the causes, treatment and prevention of cancer. It supports the work of over 3,000 scientists, doctors and nurses across the UK and funds a lot of other scientists at the UK universities. Cancer Research UK's annual allocations for scientific services amount to more than £213 million, which are raised almost entirely through public donations.

Project Overview:

DataArt has provided Cancer Research UK with the Application Management System that has automated the process of applicants applying for research funding grants.

The Application Management System is a complicated Web-application based on ASP.NET technology. In the process of its development DataArt's team has had to solve plenty of out-of-the-way tasks, such as complicated users workflows, multi-stage roles and entity-based

security, implementation of PDF-generation and etc.

Orbian is the World's leading supply chain financing company which provides cost-effective receivables financing for buyers and suppliers, and prides itself on combining the leading-edge technology with proprietary funding capabilities. Orbian's solutions enable a supplier to leverage the buyer's cost of capital with a view to significantly reducing financing costs in the supply chain relative to traditional bank and card offerings.

DataArt was chosen by Orbian as a strategic partner to help with technology component and provide the next generation of technological solution powering the electronic payables presentment and payment (EPPP) services.

Following Orbian's recently announced partnership with one of the world's leading spend management solutions providers, DataArt assisted in the integration of the Orbian system with the partner's supplier network. The challenge was to seamlessly combine the capabilities of the two parties and deliver a single interface to customers resulting in a unique, full-service offering incorporating purchase-to-pay automation and working capital management.

London Borough of Newham

DoMoreInNewham is an innovative online leisure network linking all organizations in Newham involved in sports and healthy living. DataArt has won a public government tender for the development of the network, and we can say that it has been a great honor for us to work on the project.

The Newham Team of DataArt has done their best using the most up-to-date and fool-proof technologies for the network. The network offers a user-friendly way of linking all those leisure-related organizations.

Black Ink Media is a UK-based company that offers companies a complete end-to-end solution for all their online television requirements, from filming and production to management of all media assets and Web streaming over a reliable content delivery network.

Project Overview:

DataArt has been engaged by Black Ink Media to develop Enterprise.tv (ETV) middleware platform. Enterprise.tv is a flexible video content management platform which enables companies to effectively publish streaming video content on the Internet.

Solution Highlights:

- ASP model
- Web-based browser administration
- Easy-to-navigate graphical user interface (GUI)
- Sophisticated statistics engine
- Independent content delivery network (CDN)
- Secure media asset database
- Hierarchical management access

Partnering with DataArt in the development of the ETV system has allowed Black Ink to utilize the best-of-breed development force at the cost being significantly less than estimated locally without losing time and money on internal recruitment.

Technologies:

MS SQL Server 2000, ASP, C++, MS OLAP Server
