DataArt is a custom software development and systems integration service provider for Hedge Fund industry. DataArt leverages the best talent, processes and specific industry expertise to offer top-quality cost-effective outsourcing solutions. We have built successful solutions for the financial industry, earning us an exceptional reputation for managing successful projects.

THE CHALLENGE

The dynamic nature of many Hedge Funds creates a natural requirement for customized software for many functions – research, trading, investor relationships, analytics and others. No single solution “does it all” and off-the-shelf product implementations are often hampered by integration, personnel pressure and usability issues.

Developing such custom systems requires either a solid internal team or contracting out to a reliable vendor. Both options are far from easy. It is often very difficult to find and attract quality IT personnel. With external contractors, how does one ensure trust, clear communications and a cultural fit with the vendor?

DataArt’s mission is to provide dynamic, knowledgeable teams for each specific client and task. Technology has great potential to drive the Hedge Fund industry and we have the right combination of brainpower and experience to help our clients leverage it.

THE SOLUTION

DYNAMIC TEAMS:

Our on-demand teams provide you all the IT expertise you need - and no more. We complete and complement your in-house teams with our top-notch software and project management professionals, but never duplicate your staff.

INTELLECTUAL CAPITAL:

Drawn from the most prestigious mathematics and computer science schools, our staff constitutes one of the strongest technology teams on the market, well-grounded in most modern platforms. Moreover, through many projects we’ve accumulated hundreds of man-years of experience with Hedge Fund technologies. Our continuing connection to the resources of world-class universities gives you access to the latest in research and development..

FLEXIBILITY:

We are built to be easy-to-work-with. Being able adapt to diverse, often hectic environments at Hedge Funds is the key. Using our Fast Iterative Development Methodology (FIDM), we understand tasks and deliver very quickly. We stay in constant contact with users and business stakeholders to ensure that the systems we build are aligned with changing business realities.

HEDGE FUND EXPERTISE:

DataArt has created numerous customized systems for Hedge Fund clients. These systems have been integrated with each other and with off-the-shelf and legacy systems in a user-friendly way to save time and reduce human errors. Each system has been exclusively created to meet the needs of a particular client. We also have invaluable experience working with funds going through fast growth periods.

Our areas of expertise include:

- Analytics and reporting
- Risk management
- Trading collaboration and order management
- Securities and market data storage
- Pricing
- Investor relationship management
