## BlackBerry

BlackBerry is still one of the most popular handheld devices among business users, well-known for its push email feature, a convenient keyboard layout and high security. Commonly used in corporate environments, BlackBerry uses an array of enterprise business applications. BlackBerry is usually programmed with native Java libraries, which provide access to all unique Java features.

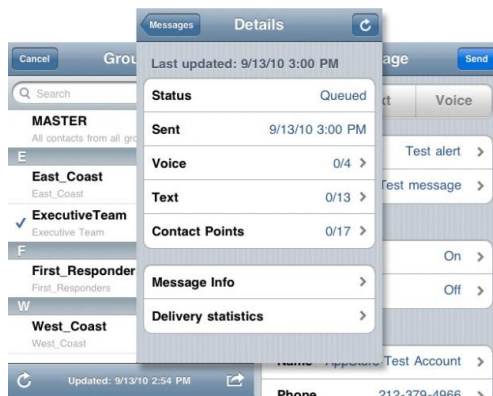

DataArt has been developing mobile apps for RIM's BlackBerry since 2005, from simple consumer apps to complex enterprise applications. DataArt's expertise includes LBS, IP Telephony, Media delivery and other apps.

## Setel

DataArt was engaged by UK's Setel to develop a long-distance calling application intended to reduce the costs related to international and satellite calls. Several Setel's clients are companies from the shipping and maritime transportation sectors with operations worldwide. The application allows these companies to make international calls as inexpensively as local ones, thus providing them with a reliable and cost-effective communication tool and eliminating the hassle of phone cards and international codes.

## Send Word Now

SWN's Alert Service is designed to reach anyone, anywhere, anytime, with any device, wired and wireless phones, email, pagers, SMS, MMS, VoIP, satellite phones and handheld devices (including the Treo and BlackBerry devices).

DataArt developed an advanced system for SWN's two-way on-demand alerting and response service, supporting BlackBerry, iPhone, and Android.
