iOS

DataArt started developing mobile apps for the iPhone in early 2008 and has since completed dozens of mobile apps in OpenGL, CoreGraphics, and CoreAnimation for global clients in healthcare, media, financial services and other industries.

In April 2010, DataArt added iPad apps development to the roster of its services, and currently has a few dozen engineers specializing in iOS application development, skilled in third-party 3D engine integration, Apple video streaming implementation, payment and advertising modules integration as well as development of stand-alone applications.

SERVICES:

- iOS apps development for iPhone/iPod Touch/iPad
- UI/UX design of the iOS apps
- Porting apps to/from iOS
- Submitting apps to the app store

SKILLS:

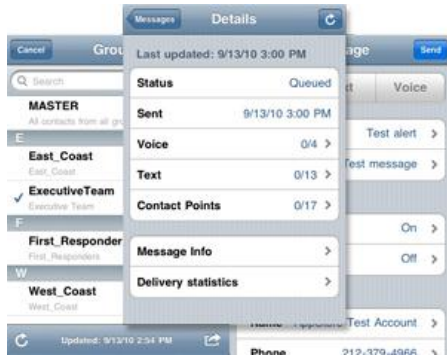

- Video/Audio streaming
- 2D/3D graphics
- GPS/LBS
- Video/Audio Streaming

Mobile Solutions: Success Story

Send Word Now

SWN's Alert Service is designed to reach anyone, anywhere, anytime, with any device, wired and wireless phones, email, pagers, SMS, MMS, VoIP, satellite phones and handheld devices (including the Treo and BlackBerry devices).

DataArt developed an advanced system for SWN's two-way on-demand alerting and response service, supporting iPhone, BlackBerry, and Android.

Artnet[®]

artnet Worldwide is an innovator in the art world and a leading Internet portal for the art market.

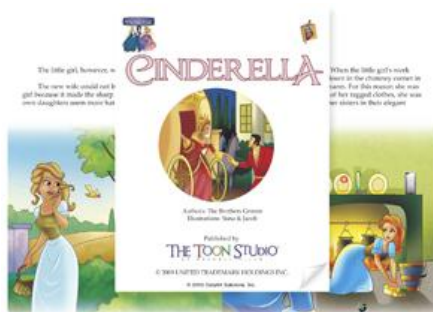

DataArt built artnet Online Auctions, a platform that allows selling online paintings, sculpture, photography, decorative art items and other kinds of artwork via an online auction mechanism.

The platform follows in the path of artnet's other products, transforming the once opaque market with price transparency, while making ecommerce a safe and reliable way of making art purchases.

Aside from the ability to create lots, the mobile version of the application provides the full auction functionality of the web-based version. The application is available for both iOS and Android platforms.

Cinderella (Toons Studio)

The interactive application Cinderella is based on the famous book of the same name.

The app features rich and colorful graphics and realistic page turns.

Cinderella comprises multiple interactive elements and mini games. The software incorporates an accelerometer and a multi-touch gesture capability, enabling extensive user interaction.

Investor Reporting iPad App

The Corporate Actions processing application for the iPad allows calculating P&L in real time, and provides a flexible portfolio hierarchy with a drill-down capability. The functionality of the application includes the capabilities for real-time position aggregation and portfolio analytics.

Classical Numismatic Group

Classical Numismatic Group, Inc., has been buying and selling ancient and medieval coins for more than twenty years. Late in 2001 we were introduced to DataArt, and we are grateful for it.

We told DataArt what we wanted. They listened, and gave us what we wanted. They know their business very well. The value received has been phenomenal. When you combine relatively low rates with high quality services, you've got a combination that can't be beat.
