DataArt to exhibit at Travel Technology Europe 2019

DataArt's Travel & Hospitality Practice will exhibit at Travel Technology Europe (TTE) in London on February 20-21, 2019.
DataArt executives, Vasiliy Malinov and Max Zhdanov, Vice Presidents of Travel & Hospitality, will be available at booth #T17E to discuss the ways that technology can transform businesses.

The team will demo prototypes of travel apps and accompanying videos: AI Hospitality Smart System, Blockchain Services Ecosystem for Car Rentals, POC Application for Travel Delay Coverage, and more.

• AI Hospitality Smart System: an IoT solution built on DeviceHive and Alexa provides device smart-enablement. The technology allows for a variety of implementations, from preventing accidents to offering extra services to hoteliers and travellers.
• Blockchain Services Ecosystem for Car Rentals: a solution that helps users deal with insurance and service bureaucracy, eliminating the need to prove accident details. By ensuring transparency in car sales operations through detailed car conditions, the solution facilitates transactions.
• POC Application for Travel Delay Coverage: a system, based on the Ethereum blockchain technology, that monitors smart contracts between passengers and insurance companies. In the event of a flight delay or cancellation, a passenger receives an insurance pay out.
