DataArt can handle all aspects of your software design, architecture, development and execution needs. We provide you with access to unparalleled expertise with an outstanding track record of delivering successful results in our chosen sectors. Our customer base consists of world-renowned organizations with a common need: the desire to accelerate and simplify their pace of user-adoption of their software products.

Travel & Hospitality Practice Skills and Services Expertise

Custom-built (bespoke) solutions and product development for all aspects of the guest experience and journey including comparison shopping, booking, aviation, ground transportation and hotel touch points. We can design, architect and build your next generation solution from minimum viable product (MVP) to full functionality, provide software product re-engineering, manage your legacy solutions and help with back log development and support.
