POC Application for Travel Delay Coverage

A system on the Ethereum blockchain that holds smart contracts between passengers and insurance companies. In the event of a flight delay or cancellation, the passenger receives an immediate insurance payout.

Potential use cases in Travel area

- All the transactions from underwriting to payouts proceed in one common space – Blockchain.
- Integration with FlightStats (a real-time flight status and airport-tracking provider) through Oraclize.
- All the transactions are automated in the Blockchain and avoid manual error.

Highlights

- Immediate insurance payout
- No grueling paperwork
- No stress for all parties

Contract form

Simple and fast contract form requesting minimum information

Underwriting

Immediate data verification and unique contract creating

Deposit insurance

Depositing money on a unique user wallet

Flight delays

Control of the departure time

Pay out

Making payments to the client's account
