

Bridging the Data to Decision Divide:

Powering Smarter Supply Chain Decisions with Decision Intelligence

Benefits of Resilient Supply Chain

A resilient supply chain minimizes disruptions, adapts to volatility, and recovers quickly — driving measurable value across revenue, costs, and customer trust.

Increased Revenue & Gross Margin

- **+3% revenue growth** from reduced stockouts and faster time-to-market.
- **+1-3% gross margin improvement** via optimized sourcing and reduced expedited freight costs.
- **Up to \$50 million in captured demand** from avoiding disruptions (e.g., weather, supplier failures).

Reduction in Working Capital

- **\$10-\$15 million** in inventory carrying costs through dynamic safety stock optimization.
- **Up to 20% lower** obsolete inventory via demand-sensing and agile production.
- **10-15-day** reduction in cash-to-cash cycle time from streamlined supplier payments

Improved Customer Satisfaction

- **+5% on-time delivery rate**, leading to higher repeat purchases.
- **Up to 90% reduction** in backorders through predictive inventory allocation.
- **+3-point increase** in Net Promoter Score due to reliability.

Reduced Costs & Waste

- **-\$5-\$10\$ million** in logistics costs (e.g., rerouting, penalties).
- **15-20% less excess raw material waste** through just-in-time replenishment.
- **Up to 25% lower expediting spend** by diversifying supplier networks.

Decisions

Barriers to Taking Effective Decisions

The ability to make effective decisions is critical, but **current decision systems and processes are inadequate.**

Breakdown in Speed

- Decisions can't keep up with the pace of change (Existing planning is not longer right).
- Lack of timely info on risks and opportunities

Breakdown in Data

- Lot of data, not clear or relevant what matters
- Dashboards tell what happened, not root causes
- Planning that relied on historic data for reactive defense is even less relevant now for proactive action postures in a new future.

Breakdown in Coordination

- "War rooms" not effective in Decentralized/Dispersed organizations
- Cross-functional trade-offs break down in siloe'd organizations

In a world of constant uncertainty, decision-making is breaking down — too slow, too siloed, and overwhelmed by noise

Closing Data to Decision Divide

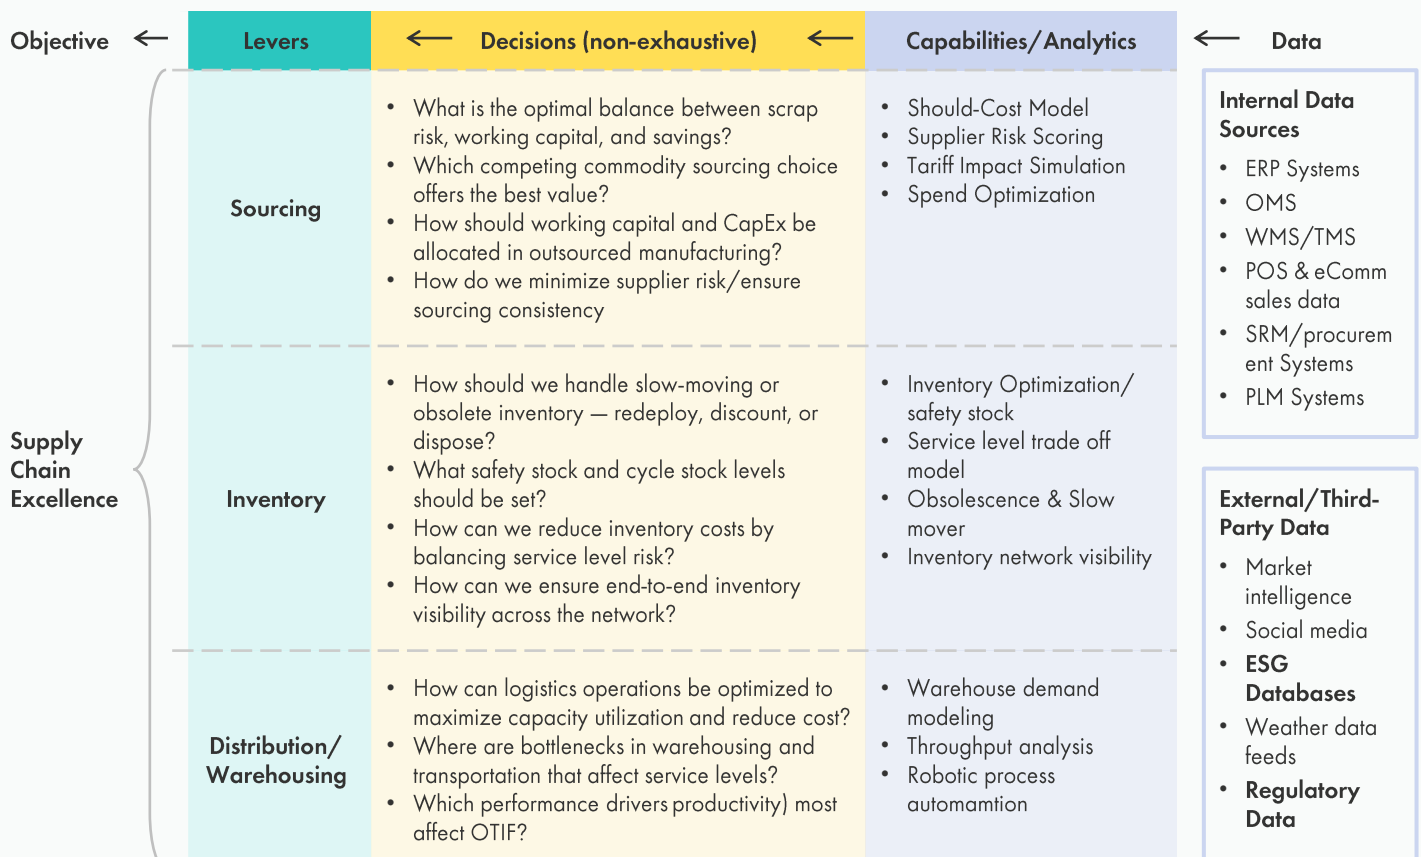

Cloverpop, the leader in Decision Intelligence, and **DataArt**, the leader in data and tech solutions, have partnered to bridge the data-to-decision divide in supply chain.

Together, we combine cutting-edge AI-driven decisioning, scalable cloud-native platforms, and deep domain expertise to transform fragmented data into actionable and collaborative decisions — helping enterprises navigate volatility, optimize trade-offs, and act with confidence at the speed of modern demand signals.

Enabling E2E Data to Decision Connection

Illustrative Example

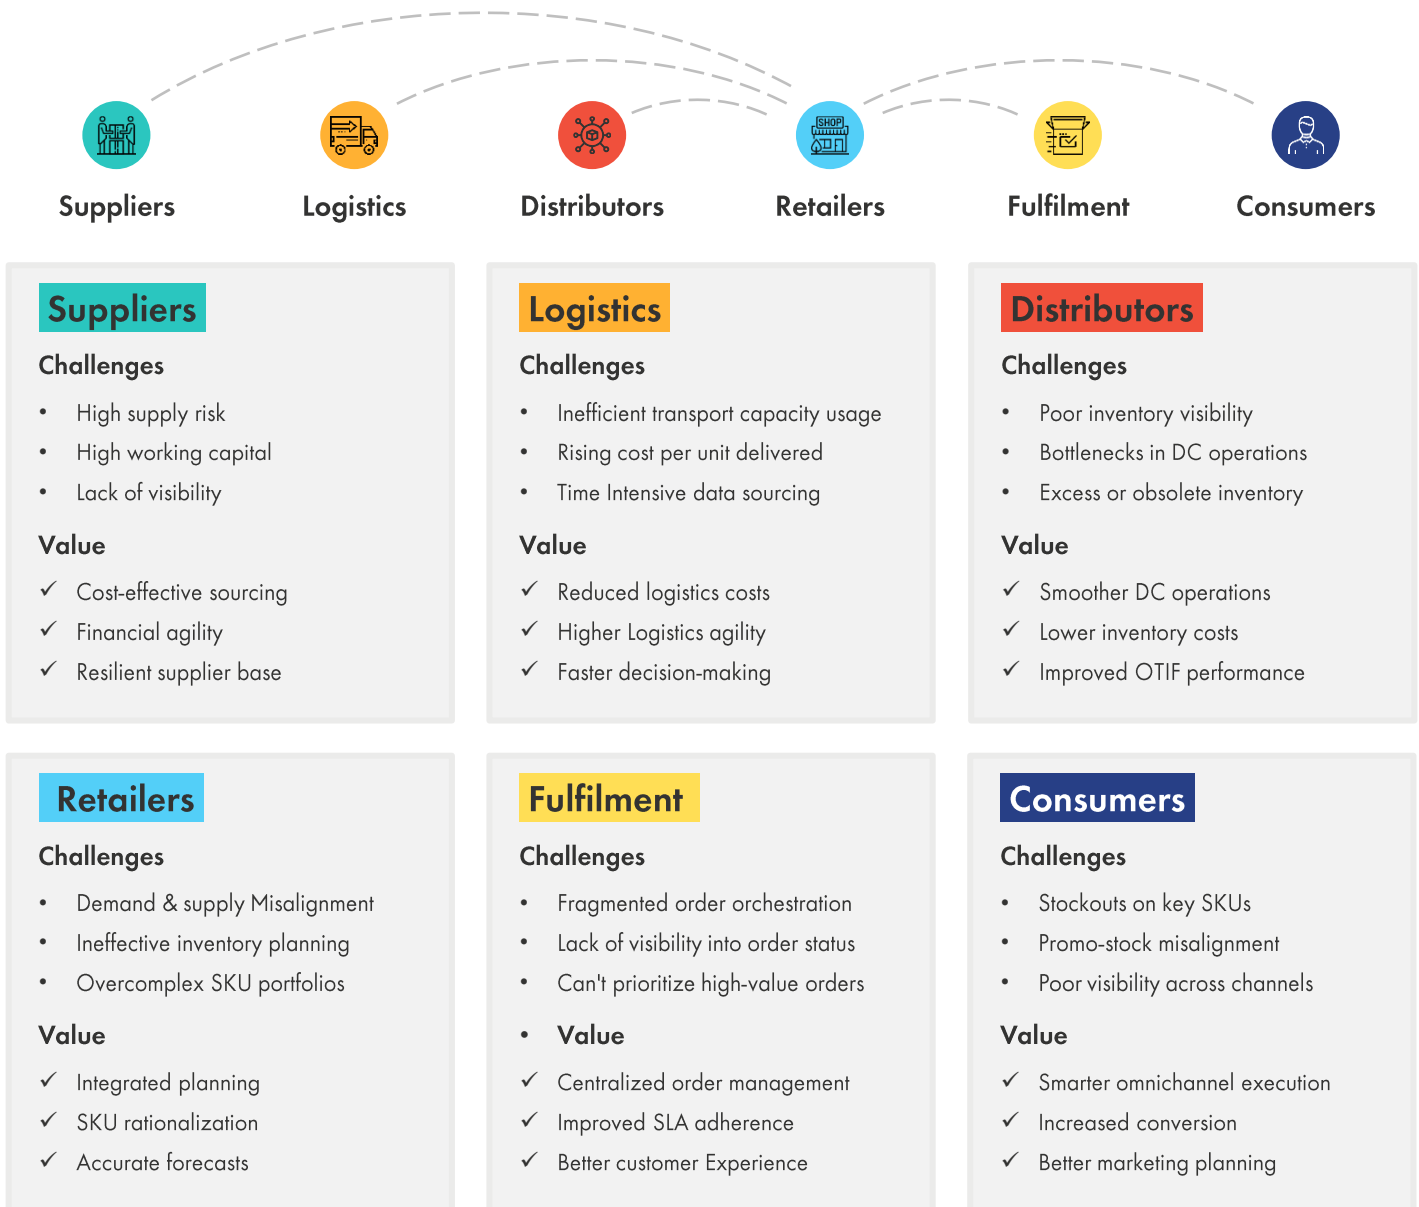

Bridging the Data to Decision Divide:

Powering Smarter Supply Chain Decisions with Decision Intelligence

We help businesses solve supply chain challenges by turning complex data into actionable insights — strengthening resilience and delivering real business value. Below is a snapshot of the major challenges we address and the tangible benefits your organization can realize by partnering with us:
